#1

Multiply. Simplify your answer and write it as a proper fraction or as a whole or mixed number.

$$\frac{2}{4} \times 1\frac{2}{3} = ?$$

- ○ $\frac{5}{6}$
- ○ $\frac{1}{4}$
- ○ $\frac{2}{9}$
- ○ $\frac{1}{10}$

#2

Multiply. Simplify your answer and write it as a proper fraction or as a whole or mixed number.

$$9\frac{2}{4} \times \frac{2}{3} = ?$$

- ○ $6\frac{4}{5}$
- ○ $6\frac{1}{3}$
- ○ $6\frac{7}{10}$
- ○ $6\frac{1}{6}$

#3

Multiply. Simplify your answer and write it as a proper fraction or as a whole or mixed number.

$$1\frac{2}{4} \times \frac{3}{4} = ?$$

- ○ $1\frac{2}{9}$
- ○ $1\frac{7}{9}$
- ○ $1\frac{1}{8}$
- ○ $1\frac{3}{4}$
