

#1

Multiply. Simplify your answer and write it as a proper fraction or as a whole or mixed number.

$$\frac{3}{4} \times 4\frac{2}{4} = ?$$

- $3\frac{3}{8}$                         $3\frac{8}{9}$   
  $3\frac{4}{7}$                           $3\frac{2}{7}$

Show your work

#2

Multiply. Simplify your answer and write it as a proper fraction or as a whole or mixed number.

$$\frac{3}{4} \times 2\frac{3}{4} = ?$$

- $2\frac{1}{16}$                           $2\frac{1}{6}$   
  $2\frac{1}{10}$                           $2\frac{3}{7}$

Question	Answer
#1	$3 \frac{3}{8}$
#2	$2 \frac{1}{16}$
#3	$1 \frac{5}{16}$
#4	$1 \frac{2}{3}$
#5	$1 \frac{1}{8}$
#6	$3 \frac{5}{6}$
#7	$5 \frac{1}{16}$
#8	$6 \frac{3}{8}$
#9	$3 \frac{7}{9}$
#10	$2 \frac{4}{9}$
#11	$2 \frac{3}{8}$
#12	$1 \frac{1}{8}$
