

#1

Estimate the difference. Round each number to the nearest whole number, then subtract.

$$1\frac{1}{2} - 36\frac{2}{3} \approx \boxed{}$$

Show your work

#2

Estimate the difference. Round each number to the nearest whole number, then subtract.

$$40\frac{1}{2} - 49\frac{2}{3} \approx \boxed{}$$
