Look at this rectangle: if the side lengths are halved, then which of the following statements about its area will be true?

7 mm

The new area will be 12 times
of the old area.

The new area will be $\frac{9}{50}$
of the old area.

The new area will be 14 times of the old area.

The new area will be $\frac{1}{4}$ of the old area.

## Show your work

Look at this rectangle: if the base is reduced fourfold, then which of the following statements about its area will be true?

3 km

10 km

The new area will be $\frac{1}{4}$of the old area.
The new area will be 2 times of the old area.

The new area will be $\frac{7}{25}$
of the old area.

The new area will be 10 times of the old area.

Show your work

Look at this square: if the side lengths are tripled, then which of the following statements about its area will be true?

The new area will be $\frac{1}{5}$ of the old area.

The new area will be 8 times of the old area.

The new area will be 12 times of the old area.

The new area will be 9 times of the old area.

Look at this rectangle: if the both dimensions are halved, then which of the following statements about its perimeter will be true?

4 in

## The new perimeter will be 4 times of the old perimeter.

The new perimeter will be $\frac{1}{2}$ of the old perimeter.

The new perimeter will be $\frac{3}{5}$
of the old perimeter.
The new perimeter will be 2 times of the old perimeter.

## Show your work

Look at this rectangle: if the side lengths are reduced fourfold, then which of the following statements about its area will be true?

The new area will be 9 times of the old area.

The new area will be $\frac{89}{1250}$
of the old area.

The new area will be $\frac{1}{16}$ of the old area.

The new area will be 14 times of the old area.

Look at this cube: if the side lengths are halved, then which of the following statements about its surface area will be true?

10 mm
$10 \mathrm{~mm} \quad 10 \mathrm{~mm}$

The new surface area will be 2 times of the old surface area.

The new surface area will be $\frac{1}{4}$ of the old surface area.

The new surface area will be 4 times of the old surface area.

Look at this cube: if the side lengths are reduced fourfold, then which of the following statements about its surface area will be true?

7 cm
$7 \mathrm{~cm} \quad 7 \mathrm{~cm}$
The new surface area will be $\frac{1}{16}$ of the old surface area.
The new surface area will be 4 times of the old surface area.

The new surface area will be $\frac{719}{10000}$
of the old surface area.The new surface area will be 12 times of the old surface area.

## Show your work

\#8
Look at this cube: if the side lengths are doubled, then which of the following statements about its volume will be true?

7 mi
$7 \mathrm{mi} \quad 7 \mathrm{mi}$

The new volume will be $\frac{4}{55}$
of the old volume.
The new volume will be 8 times of the old volume.

The new volume will be 41 times of the old volume.

The new volume will be 64 times of the old volume.

Look at this cube: if the side lengths are quadrupled, then which of the following statements about its surface area will be true?

9 in 9 in

The new surface area will be $\frac{7}{16}$ of the old surface area.

The new surface area will be 16 times of the old surface area.

The new surface area will be 3 times of the old surface area.

Look at this rectangle: if the side lengths are reduced fourfold, then which of the following statements about its area will be true?

The new area will be $\frac{1}{16}$
of the old area.

The new area will be $\frac{463}{10000}$
of the old area.

The new area will be 10 times of the old area.

The new area will be 13 times of the old area.

Look at this square: if the side lengths are tripled, then which of the following statements about its perimeter will be true?

The new perimeter will be 8 times of the old perimeter.

The new perimeter will be $\frac{1}{2}$ of the old perimeter.

The new perimeter will be 3 times of the old perimeter.

The new perimeter will be 9 times of the old perimeter.

Look at this rectangle: if the base is quadrupled, then which of the following statements about its area will be true?

The new area will be 8 times of the old area.

The new area will be 5 times of the old area.

The new area will be 4 times of the old area.

The new area will be $\frac{2}{3}$
of the old area.
